1. Screenshot 1 – Jira Backlog with Epics and User Stories

the backlog screenshot here. This is the first required screenshot.

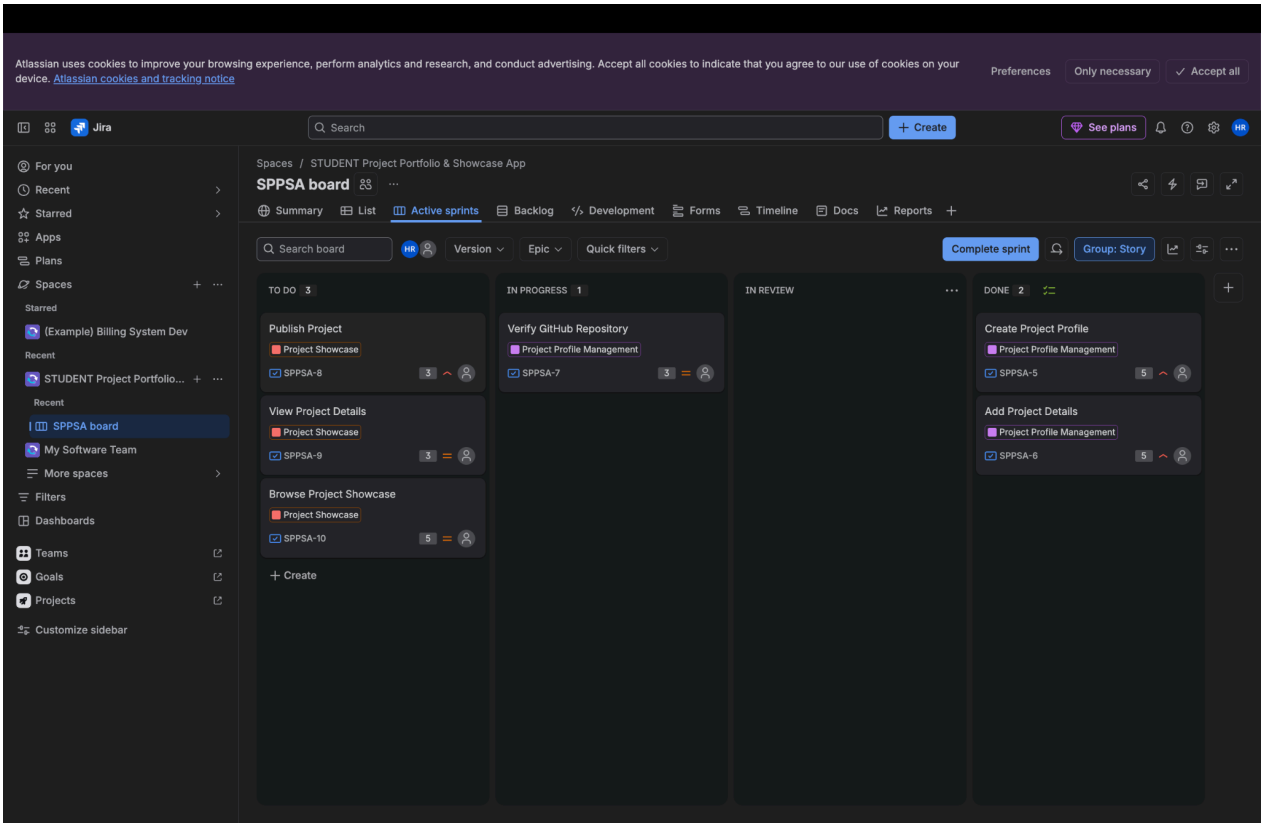

2. Screenshot 2 – Story Point Assignments

the story-point screenshot here. This is the second required screenshot.

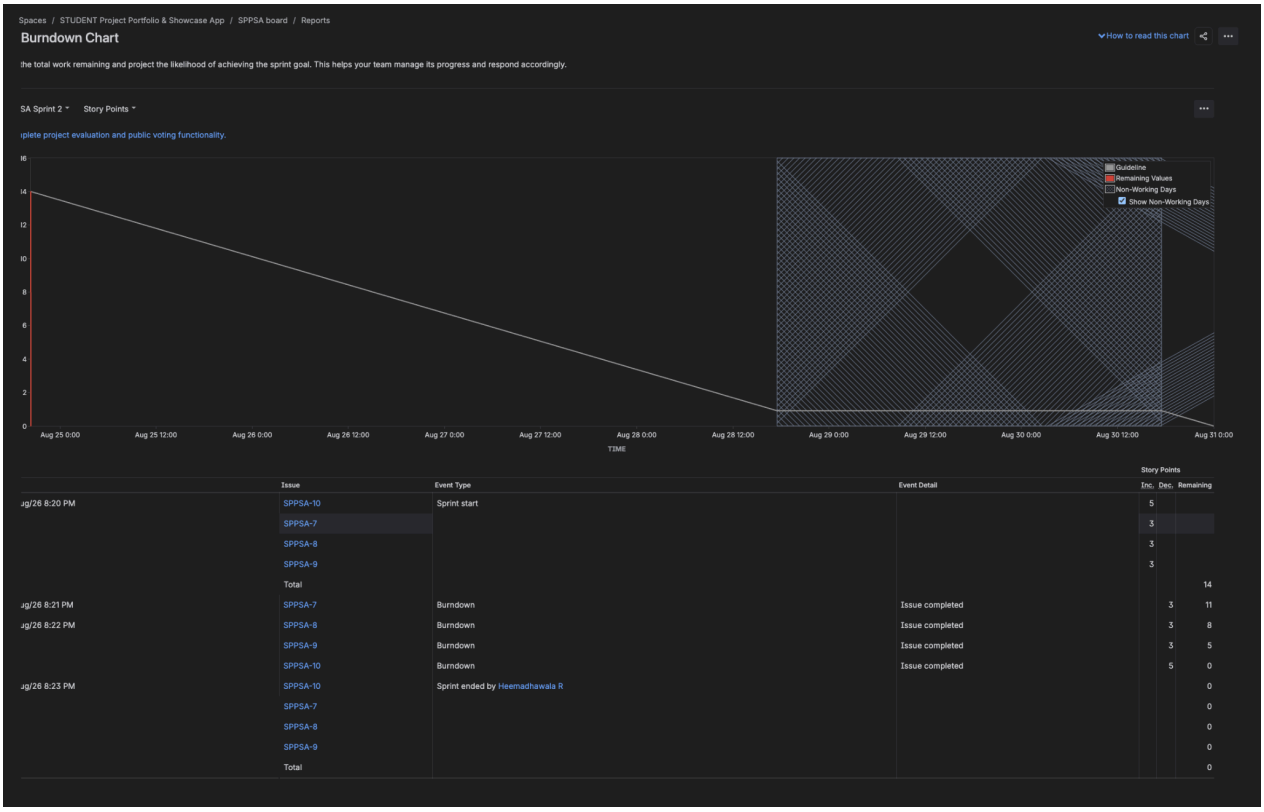

3. Screenshot 3 – Active Sprint Board

the Active Sprint screenshot here. This is the third required screenshot.

4. Screenshot 4 – Burndown Chart

the Burndown Chart screenshot here. This is the fourth required screenshot.

6. Reflection Questions

1. Did your estimations reflect the actual effort?

Yes. The story-point estimates reasonably reflected the effort and complexity of the selected work. Fibonacci-style values such as 3, 5 and 8 were used. In Sprint 2, the Burndown Chart starts at 14 story points and reaches 0 as the four selected stories are completed, showing that the estimates were suitable for sprint planning.

2. Was your backlog well-prioritized?

Yes. The backlog was organized according to user impact and priority. The Jira backlog shows High and Medium priority values, which helped identify the more important stories and organize the work for the sprint.

3. How did your simulated sprint align with your plan?

The simulated sprint aligned well with the plan. The selected stories were placed into the sprint and moved through the workflow from To Do to In Progress and then Done. Two sprints were completed, and the Sprint 2 work shown in the Burndown Chart was completed from 14 story points down to 0.

4. What insights did the burndown chart give about your team's capacity?

The Burndown Chart showed the rate at which the team completed the committed work. Sprint 2 decreased from 14 remaining story points to 11, 8, 5 and finally 0. This indicates that the team completed the committed sprint work and gives a useful indication of the amount of work the team could handle during the simulated sprint.

7. Conclusion

The Jira exercise demonstrated the Agile-Scrum workflow by converting functional requirements into Epics and User Stories, prioritizing and estimating the backlog, planning and completing two sprints, moving work through the sprint board, and monitoring progress using the Burndown Chart.
